Obviously, emulation of any system takes a fair Graphical OS, takes about 60 seconds to boot - With busybox, Lua interpreter and test cases, takes about 20 seconds to boot - With internet access, telnet, ping, wget and links.. I'll cover obtaining the ROMs, configuring the emulator, setting up the OS, and finally, provide a few pointers and links of interest to get you going in your 'new' OS.. It relied on MS-DOS for a lot of the heavy lifting, which is why a simulation can be so small; you just trap the DOS hardware interrupts.
